五人 更新與刪除作業

axios非同步處理

axios ajax Framework

何謂axios

- axios 是一個Base on在 promise 的 HTTP Library。
- 可以採預GET/POST/PUT/DELETE進行非同步呼喚
- 輕量級ajax library

下載axios frame<u>work</u>

配置axios

https://github.com/axios/axios

RESTful後端服務設計-更新客戶資料服務

採用RESTful架構設計服務

使用PutMapping設定consumes options

- 要求前端採用JSON內容傳遞
- 反序列化封裝資訊至JavaBean

使用JdbcTemplate進行資料異動作業

採用produces設定回應前端訊息為JSON文件格式

```
//客戶被刪除了 選是更新成功 零筆
if (affect>0) {
    msg.setCode(200);
    msg.setMsg("客戶資料更新成功");
    //預設Http status code 200
}else {
    //Http status code-400
    response.setStatus(400);
    msg.setCode(400);
    msg.setMsg("客戶資料更新不到 資料不存在");
}
```

Server Resource配置-控制器註冊與注入服務位址

自訂服務位址的resource file

控制器註冊自訂Resource 與注入項目

採用thymeleaf 嵌入服務位址為前端JS Variable

- •轉換成前端Vue資料模組
- 提供前端axios採用非同步呼喚使用

```
1 putside.ubike.service=https://tcgbusfs.blob.core.windows.net/dotapp/youbike/v2/youservice.customers.update=http://localhost:8080/tibamecustomers/update/rawdataservice.customers.delete=http://localhost:8080/tibamecustomers/delete/key/%s/rawouservice.customers.delete=http://localhost:8080/tibamecustomers/delete/key/%s/rawouservice.customers.delete=http://localhost:8080/tibamecustomers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/%s/rawouservice.customers/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/delete/key/key/de
```

```
package com.tibame.controller;
 3.import java.io.IOException;
   @PropertySource(value= {"classpath:services.properties"})
37 @RequestMapping(path="/tibamecustomers")
38 public class TibameCustomersController {
@Value("${service.customers.update|") //使用Spring EL
rivate String customersUpdateService;
@Value("${service.customers.delete}") //使用Spring EL
rivate String customersDeleteService;
<script th:inline="javascript">
    //global變數 崁入thymeleaf 運算變數內容 變成JavaScript在網頁中的敘述
    var country=/*[[${country}]]*/ ''
    var message=/*[[${message}]]*/ ''
    //Json String raw data變成JavaScript array
    var data=/*[[${data}]]*/ []
    var updateService=/*[[${updateService}]]*/ ''
     //刪除客戶服務位址
     var deleteService=/*[[${deleteService}]]*/ ''
```

Client Side對話盒更新資料-axios ajax非同步呼喚後端服務

使用axios.put method進行服務呼喚

put(app.updateAPI,data=app.curCustomer,hea
der={"Content-Type":"application/json"})

傳遞相對物件JS (JSON 物件)

設定request Content-Type:application/json

使用then() 進行callback處理

```
//客製化按鈕(更精確)
buttons:[
       text:'更新',
       click:function(){
           app.isAwait=true;
           //TODO 進行非同步處理 呼喚後端服務 進行資料更新
           console.log(app.updateAPI);
           //進行axios非同步處理
           //設定equest header-Content-Type:application/json
           //帶資料
           axios.put(app.updateAPI,data=app.curCustomer,
           header={"Content-Type":"application/json"})
           //success callback Http Status 2xx
           .then(res => {
               console.log(res)
               //取出資料
               app.alertMessage.text=res.data.msg;
               app.alertMessage.image='.../.../images/success.png';
               app.isMessage=true;
               app.isWait=false;
```

Client Side對話盒更新資料-axios ajax Demo

總結:14-4 axios非同步處理更新與刪除作業

學習到axios進行ajax非同步處理,呼喚後端服務, 進行資料更新,下一個章節我們來探討Spring Security架構。
